SUMMARY

Seven years as Deputy CEO for Corporate Governance and Chief Legal Officer of a regional e-government operator: I arranged the board meetings and carried the board's decisions through to implementation. In 2024-2025 I was Operational Co-Founder of OmniBazaar, a decentralized e-commerce marketplace, where I led its legal setup, governance and operating structure. Since 2025 I have run Aideazz AI Lab, where I own the research, priorities, operating systems and production outcomes.

I do my best work where the problem starts out ambiguous: find out what is actually happening, decide what matters, bring a recommendation, build the operating process around it, and own the result. I now want to do that full-time, for one CEO's priorities.

I operate an AI-native development environment where specialized agents handle much of the implementation execution. I own requirements, architecture, orchestration, evaluation, deployment, monitoring and production decisions. Claude and ChatGPT are daily tools; priorities, verification and consequential decisions stay with me.

7 yrs Deputy CEO & CLO

15 production services · 20 scheduled jobs

11,000+ job postings screened

2,800+ CRM deals · 2,100+ companies

420+ AI-visibility audits

600+ automated tests

2,432 → 73 emails matched to deals (60-day replay)

EXPERIENCE

Founder & AI Product and Operations Lead — Aideazz AI Lab · Panama / Remote · 2025-Present

Founder-led AI lab. I set the priorities and own the research, operating systems, CRM and production decisions; specialized AI agents carry much of the execution.

Research → recommendation

- Outcome labels in my job-search pipeline showed one role category made up 7 of the 12 postings I rejected but only 2 of the 12 I rated positive. I cut it from targeting within a day and re-pointed the search queries to the categories that fit.
- I judge a source by its data, not its marketing: two job boards looked equally good on their websites, but one had no posting newer than 33 days and 91% past its own expiry. I rejected it, connected the other, and wrote down why.
- When the more sophisticated option lost, I said so: an upgrade to my AI screening step scored lower on a test set built from my own past decisions, so I kept it switched off.

Inbox triage, tracking and briefings

- Built a reply detector that reads two inboxes and matches every sender against the CRM. Replayed on 60 days of real mail, it narrowed 2,432 emails to the 73 from people linked to a deal, including a hospital prospect's reply that had sat unseen for nearly eight weeks. Live, it checks every 10 minutes and alerts me with the deal linked.
- Every CRM stage is named for whose move it is; one approved send moves the deal, stamps delivery and books the follow-up. A daily read-back audit checks every priority deal against a six-part completeness standard and alerts on any gap.
- A morning briefing replaced opening records one by one: the day's priority queue, each item with a sourced company summary where sources exist.
- CRM at volume in HubSpot: agents research, qualify and draft, and one human approval sends. 2,800+ deals, 1,300+ contacts and 2,100+ companies.

Operational fixes — what breaks quietly

- Found trial sign-ups that had never reached the CRM since launch, while the sender's log looked healthy. I audited from the receiving end, fixed it and backfilled all 28 lost users.
- Found a spending cap that could never fire: the budget guard read a price field the vendor never sends. I fixed it against the vendor's real response and published the postmortem.
- When a vendor retired the AI models my services used, I moved all six products onto a five-provider backup chain that week, with no outage.

Job-posting sourcing and screening at volume

- Designed an AI sourcing-and-screening pipeline that has screened 11,000+ job postings. Hard rules (location, pay) filter first, an AI model scores the rest, and it learns from the decisions I record in the CRM; no change to the AI scoring step goes live until it has been tested against my past decisions. It is the method I would bring to candidate sourcing and screening.

Operating cadence and documentation

- Set the coordination protocol three AI coding agents follow even though they cannot see each other's chats: claim before touching shared systems, a handoff block on every pause (done / next / verified by / risk), and every work product in a file or the CRM, never only in a chat.
- I publish failures openly: 20+ named postmortems in a public [AI Operations Wiki](#), plus an [AI Operations SOP](#).

Operational Co-Founder — OmniBazaar, decentralized e-commerce marketplace · Remote · 2024–2025

- Led strategic planning and the operational structure for the decentralized marketplace.
- Led the legally compliant setup of a DAO LLC in the Marshall Islands, and its governance operations.
- Drafted the Operating Agreement covering the DAO's tokenomics and the enforceability of its smart contracts.

Deputy CEO for Corporate Governance & Chief Legal Officer — JSC “E-GOV OPERATOR” · Penza region, Russia · 2011–2018

A ~60-person company moving the delivery of public services into electronic form for the regional government.

- Owned the board process: arranged board meetings for stakeholders drawn mainly from the regional government and drove decisions through to implementation.
- Made sure every public service the company built in electronic form was lawful under existing legislation, and managed those projects from the legal side.
- Conducted due diligence on public contracts and handled the company's court litigation.

Deputy CEO, Business Development — Fundery LLC, fintech · Russia · 2017–2018

Figures are minimums from production logs and the live CRM, counted 28–29 September 2026; CRM totals re-checked 6 October 2026.

HOW I WORK

Bring the recommendation, not just the research. I investigate until I can say what matters, what I recommend and what happens next. · **Own the loose ends.** If information is falling between systems, finding the cause and closing the loop is part of the job. · **AI for leverage, not for judgment.** AI researches, drafts and executes; I stay accountable for priorities, verification and decisions. · **Build systems around recurring work.** A task that keeps eating attention becomes a documented workflow, a scheduled report or an agent-assisted process. · **Verify outcomes, not activity.** A “sent” status is not the result; I check that the business result actually happened.

CORE CAPABILITIES

CEO leverage (7 years as Deputy CEO) · Market and company research with recommendations · Inbox triage and tracking systems · Executive briefings and reporting · Board meetings & corporate governance · Process mapping · Operational problem-solving · Sourcing & screening pipelines · CRM operations · Workflow automation · Documentation

Tools: Claude · ChatGPT · Claude Code · Cursor · specialized AI agents · HubSpot · Make · Resend · GitHub

EDUCATION & PROFESSIONAL DEVELOPMENT

Anthropic Academy — Claude Certification Program · 2026, in progress · Polkadot Blockchain Academy, PBA-X Wave 3 · 2025 · How-To-DAO Cohort · 2025 · MA, Social Psychology — Penza State University, Russia · 2018 · Blockchain Regulation — MGIMO, Moscow, Russia · 2017 · Presidential Program for Executive Management — RANEPA, Russia · 2015 · Internship — Nyskapingsparken Innovation Park, Bergen, Norway (RANEPA program) · 2015
