SUMMARY

I design intelligent systems and the experience around them — from the agents that run a business to the films they make.

Seven years as Deputy CEO and Chief Legal Officer running large digital-transformation programs at board level, and Deputy CEO for business development at a fintech. Since May 2025 I have built and run AI systems in production — agents, workflow automation, a CRM growth loop and a public API, 15 long-running services on one cloud VM — and I own them from problem to measured result. My agents learn from recorded human decisions, and I measure every change against those decisions before it ships.

EXPERIENCE

Founder & AI Product and Solutions Lead — Aideazz.xyz · Panama / Remote · 2025–Present

Founder-led AI lab. I design, build and operate its production AI systems end to end — the architect, the reviewer and the on-call.

AI screening judge — measured on real decisions before it ships

aideazz.xyz/ai-ops-wiki.html

An LLM judge screens the jobs my search agent finds; what the model may not decide is enforced in code — a location or pay it misreads is overruled from the posting itself. Each of my own decisions is stored with the posting it was made on, and the judge is measured against them: 14 of 20 rejections and 8 of 18 applications agree. A retrieval (RAG) upgrade scored lower on that test, so it ships switched off.

Approved-send growth loop — HubSpot + Resend

The acquisition loop I run in production: research, qualify, draft, one human tap, send, then delivery and open written back to the CRM. 1,900+ deals, 989 contacts, 1,411 companies attributed by the agents. Send is fail-closed: if a PDF or signed .docx fails to load, the email is refused so it cannot claim an attachment it did not carry.

Fail-closed publishing and a five-provider LLM chain

aideazz.xyz/ai-ops-wiki.html

Every model call in the fleet has an ordered fallback (Anthropic, OpenAI, Gemini, Grok, Groq). When Groq deprecated the models I used, the fleet kept serving — a config change, not an outage. The daily publisher will not print a number it cannot trace; if the model decorated the facts, the day stayed silent. A 130-test eval harness (unit, integration, golden-set) runs in under a minute at \$0 API cost.

HOW I WORK

I operate an AI-native development environment where specialized agents handle much of the implementation execution. I own requirements, architecture, orchestration, evaluation, deployment, monitoring and production decisions. I judge a new data source by running it through the live gate before integrating it: the source added in August cleared 76% against ~21% for the rest of the fleet. I write the failure down and name it — clients can read how I debug before they hire me.

AVAILABLE FOR

- AI agents and workflow automation that clear an operational bottleneck, owned to a measured result
- Evals and feedback loops: offline replay on real decisions before a change ships

- Agent context and memory design (RAG + pgvector in production), MCP and API integrations
- Client delivery and account growth in English, prioritized by KPIs
