SUMMARY

Since 2025 I have owned the AI products of AIdeazz AI Lab end to end: I decide what gets built and in what order, write the requirements, decide the tests a change must pass, launch it, and measure the result in production. Specialized AI agents do much of the implementation; the product decisions, the acceptance and the outcome are mine.

In 2024–2025 I was Operational Co-Founder of OmniBazaar, a decentralized e-commerce marketplace, where I led strategic planning and its operating structure. Seven years as Deputy CEO and Chief Legal Officer in regulated e-government taught me to treat constraints as product inputs. In my AI systems that means hard rules in code, fail-closed defaults, a human approval before anything irreversible, and no number shown unless it traces back to a record.

6 AI products · **15** production services | **600+** automated tests — unit, integration, golden-set | **11,000+** job postings screened | **7 yrs** Deputy CEO & CLO

EXPERIENCE

Founder & AI Product and Operations Lead — AIdeazz AI Lab · Panama / Remote · 2025–Present

Founder-led AI lab. I own its six AI products and decide what each one does next. Among them: two public products, an AI Visibility Audit API and EspaLuz, a bilingual AI tutor; and two systems that run my own work, where I am the user: my job-search sourcing and screening pipeline and an approved-send CRM outreach loop.

Own the AI Product Backlog & Strategy

- **AI Visibility Audit API — idea to launch to measured use.** A public product, launched July 2026: anyone pastes a website address and, with no login, gets a score for how well ChatGPT, Perplexity and Claude can find and cite it. I designed the rubric, 34 checks in 4 weighted categories, and an output a non-technical buyer can act on: a grade, and the fix and the reason for every failed check. In the server logs for 1–10 October alone: 39 audits of 18 websites — 18 of them run by people on the public page and 21 by my own outreach agents before a new prospect is contacted.
- **Prioritized from outcome data.** In my job-search pipeline, outcome labels showed one role category made up 7 of the 12 postings I rejected but only 2 of the 12 I rated positive. I cut it from targeting within a day and re-pointed the searches to the categories that fit.
- **Said no on evidence.** Two job boards looked equally good on their websites, but one had no posting newer than 33 days and 91% past their own expiry. I rejected it, connected the other, and wrote down why.
- **Acceptance criteria: what the model decides and what code decides.** The spec says what the model decides and what code decides: hard facts in a posting, such as a country restriction or a pay figure, are checked in code; judgment calls go to the model. When one of my override rules wrongly let three postings through because it saw "LATAM" and ignored "U.S. only", I changed it to ask the same location checker the filters use.

Establish AI Quality & Evaluation Frameworks

- My acceptance criteria are tests: a change is accepted only when the tests and the production logs prove it works. 600+ automated tests on the job-discovery pipeline (unit, integration, golden-set), running in about a minute.
- **Golden evaluation set — accuracy beats sophistication.** An upgrade to my AI screening step (retrieval, RAG) scored lower on a test set built from my own past decisions, so it stayed switched off: a change that measures worse does not ship, however sophisticated.
- I fix the measurement itself: my screening replay was grading against blank postings, so its score measured the blank. Each decision is now stored with its real posting and replayed before a change ships.
- **Hallucination guardrail.** When a provider balance ran out, my daily publisher fell to a cheaper fallback model and for ten weeks described a database the system has never used, while every run reported clean. I stopped it at the source and rebuilt it to write only from facts measured on the running system: an article with a number absent from that bundle, or naming infrastructure that is not installed, is rejected and regenerated; if the model still cannot stay inside that bundle, an evidence-only article is composed from the licensed numbers, and a day with too few verified facts gets no article.

Balance rapid innovation with operational stability

- **Inquiry concierge (Make + Claude, with a backup).** Website form and chat inquiries reach HubSpot at once; a Make.com scenario has Claude draft the reply, and the email goes out only after a one-tap human approval. When Make's AI credits ran out and drafts silently stopped, I added a backup: my server now drafts on a five-provider chain if Make has not answered in time, so an inquiry is never left unanswered. Published as a case study.
- **Infrastructure dependency — decided under uncertainty.** When a vendor retired the AI models my services used, I moved all six products onto a five-provider fallback chain that week, with no outage.

- Outreach sends after one human approval, which also moves the deal, stamps delivery and books the follow-up (2,800+ deals). The send is fail-closed: if an attachment fails to load, the email is refused. That sometimes costs one send; a wrong attachment in front of a client costs trust.

Manage Project Operations & Risk Log

- **Vendor cost against budget.** Found a spending cap that could never fire: the budget guard read a price field the vendor never sends. Fixed it against the vendor's real response and published the postmortem.
- **Integration risk — monitoring from the receiving end.** Trial sign-ups to EspaLuz, my language-tutor bot, had never reached the CRM since launch, while the sender's log looked healthy. I found it by auditing from the receiving end, fixed it and backfilled all 28 lost users.
- **Handoffs, each with a risk line.** Set the coordination protocol three AI coding agents follow even though they cannot see each other's chats: claim before touching shared systems, a handoff block on every pause (done / next / verified by / risk), and every work product in a file or the CRM, never only in a chat.
- I publish failures openly: 20+ named postmortems in a public AI Operations Wiki, plus an AI Operations SOP.

Operational Co-Founder — OmniBazaar, decentralized e-commerce marketplace · Remote · 2024–2025

- Led strategic planning and the operational structure for the marketplace.
- Led the legally compliant setup of a DAO LLC in the Marshall Islands, and its governance operations.

Deputy CEO for Corporate Governance & Chief Legal Officer — JSC "E-GOV OPERATOR" · Penza region, Russia · 2011–2018

A ~60-person company moving the delivery of public services into electronic form for the regional government.

Drive Stakeholder & Compliance Alignment

- **Stakeholder alignment.** Owned the board process: arranged board meetings for stakeholders drawn mainly from the regional government and drove decisions through to implementation.
- **Legal constraints as product inputs.** Made sure every public service the company built in electronic form was lawful under existing legislation, and managed those projects from the legal side.
- Conducted due diligence on public contracts and handled the company's court litigation.
- Ran delivery at board level for seven years: vendor coordination, operational delivery, cost and performance reporting.

Deputy CEO, Business Development — Fundery LLC, fintech · Russia · 2017–2018

LIVE WORK — LINKS

- **AIdeazz hub** · Portfolio · AI Ops Wiki · SOP · Blog
- **EspaLuz** — conversational AI: a bilingual Spanish tutor for expat families on WhatsApp and Telegram that remembers each family's earlier conversations (turns stored as embeddings in Postgres with pgvector; the three most similar retrieved before replying), born from my own family's need · in production since May 2025 · WhatsApp · Telegram
- **AI Visibility Audit API** — 34 checks on how a business shows up in AI search answers · public since July 2026 · aideazz.xyz/api
- **VibeJobHunter** — the job-search sourcing and screening pipeline above · since November 2025 · GitHub
- **CTO AIPA** — my AI technical agent: reviews code changes and runs the CRM and outreach automation · since October 2025 · GitHub
- **ATUONA AI Film Studio** — 9 published AI films from an automated production pipeline, drawn from a universe of 99 poems · since August 2025 · atuona.xyz/aifilmstudio

Figures are minimums from production logs and the live CRM, counted 28–29 September 2026; CRM totals re-checked 6 October 2026; Audit API use from the server logs for 1–10 October 2026; product start dates from each repository's first commit (EspaLuz: deployed 16–17 May 2025); film count as of 11 October 2026.

TOOLS

AI: Claude · ChatGPT · Claude Code · Cursor · LLM APIs (OpenAI, Anthropic, Gemini, Groq) · LangGraph · LangChain (conversation memory in EspaLuz) · RAG (pgvector) · multi-provider LLM routing · evaluation systems · human-in-the-loop workflows · **Product & CRM:** HubSpot · Make · Resend · webhooks · REST APIs · scheduled jobs (cron) · **Build:** Python · TypeScript / Node.js · FastAPI · PostgreSQL · Docker · Playwright · Oracle Cloud · Git

EDUCATION & PROFESSIONAL DEVELOPMENT

Anthropic Academy — Claude Certification Program · 2026, in progress · Polkadot Blockchain Academy, PBA-X Wave 3 · 2025 · How-To-DAO Cohort · 2025 · MA, Social Psychology — Penza State University · 2018 · Blockchain Regulation — MGIMO, Moscow · 2017 · Presidential Program for Executive Management — RANEPA · 2015 · Internship — Nyskapingsparken Innovation Park, Bergen, Norway · 2015
