

Non-exclusive training licence

Eight private production repositories. I keep the Lab.

This is a licence of a copy of source I solely own, for model-training and related evaluation by a matched lab through HUD / DataVendor. It is not a sale of Aideazz AI Lab, not a transfer of copyright, and not an exclusive grant. Every product stays in production on my server, under my brand, on my domains.

THE DEAL IN ONE LINE

A matched lab gets a copy of the eight private repos listed below. I keep copyright, the brand, the domains, the running systems, and the right to licence the same corpus again. Lazarus / Turing already has this same non-exclusive shape on the table. An exclusive HUD paper would poison that second cheque. I will not sign exclusive.

HUD'S OWN ESTIMATE - 30 AUG 2026 - datavendor.ai/codebases/result

Eight private repos. Public discoverability: not public. Bundle score 44% Promising. Point estimate \$89,481. Range \$61,067-\$350,557. HUD: a measurement they could not take is imputed, not zeroed; the range is imputed-empty vs imputed-perfect. I treat \$61,067 as the cautious reading of their model. \$350,557 is not cash I will cite. This screen transfers no rights. A payout exists only after a signed licence and money in the bank.

DISCLOSURE - DO NOT HIDE THIS

These eight repositories were public GitHub until 30 August 2026. I built in public. I flipped them to private the same day as the DataVendor estimate so the tool could grade private code. Making them private does not un-publish GitHub Archive or prior clones. If that fact zeros or cuts the price, say so on the call. I will not represent this corpus as never-public.

THE GRANT

Non-exclusive licence to a copy of the eight private repositories, for model-training and related evaluation use by a matched lab through HUD / DataVendor. Same corpus may be licensed to more than one buyer. Each licence is a separate payment.

I RETAIN

Copyright. The Aideazz AI Lab brand. Domains. The right to operate, improve, and sell every product. The running systems. Future commits after the licensed snapshot.

OUT OF SCOPE

Production runtime and secrets (.env, keys, tokens). HubSpot CRM. Telegram and WhatsApp chat logs. Customer PII. Third-party or client material. Hostnames and internal record identifiers. The public website repo (aideazz) stays public because it deploys <https://aideazz.xyz/portfolio>.

WHY A TRAINING LAB PAYS FOR THIS CORPUS

This is not a resume and not an invitation to clone GitHub. It is a private snapshot of production agent systems that ran in the world, with evals, incident write-ups, bilingual commercial messaging, and a time-series data repo. Public tutorial repos are already in every scrape. This bundle is the operating history of one founder shipping daily.

- Production multi-agent systems with eval gates, not notebooks: LangGraph job hunter, WhatsApp + Telegram advisors, publishing agent, ops brain, paper-trading agent.
- Bilingual ES/EN commercial messaging on WhatsApp and Telegram - the kind of tool-use trace labs cannot cheaply synthesise.
- Ops brain with a published incident wiki of real production failures (named failure modes, verified from logs). Grounding and duplicate-publish incidents are in the public wiki; the source that produced them is in this bundle.
- atlas-captures is ad-angle time-series data, not only code. HUD buys data.
- 2,546 commits, 88 PRs (67 merged), 247.7 MB archive across eight private repos (HUD archive, 30 Aug 2026).

THE EIGHT REPOS - HUD'S POINT ESTIMATE

Repository	Score	Point	Range	Training signal
VibeJobHunterAIPA_AIMCF	58%	\$17,020	\$12.7k-\$50.6k	LangGraph hunter; 556 commits; 54k LOC; 131-test eval
EspaLuzWhatsApp	57%	\$16,735	\$12.4k-\$49.7k	WhatsApp advisor; 388 commits; 27,001 LOC; bilingual tool-use
EspaLuz_Influencer	57%	\$16,662	\$12.9k-\$45.2k	Publishing agent; 126 commits; 100% CI
EspaLuzFamilybot	52%	\$13,303	\$10.8k-\$32.0k	Telegram advisor; 207 commits; 28,427 LOC; 100% CI
AIPA_AITCF	47%	\$10,910	\$5.5k-\$64.5k	Ops brain; 1,052 commits; 36 PRs; 76.3% CI; five-provider LLM chain
dragontrade-agent	35%	\$6,450	\$3.0k-\$47.2k	Human-on-last-click paper trading; 173 commits
AILA	25%	\$4,264	\$2.0k-\$31.2k	Personal AI (paused); 9 commits
atlas-captures	24%	\$4,137	\$1.9k-\$30.2k	Ad-angle time-series data; 35 commits
EIGHT TOGETHER	44%	\$89,481	\$61.1k-\$350.6k	2,546 commits; 88 PRs (67 merged); 247.7 MB archive

Almost every repo has test coverage imputed. AIPA LOC/docs were not measured. I do not ask you to treat imputed-perfect (\$350k) as an offer.

LIVE PROOF THE SOURCE RAN (not in the licensed copy)

These URLs are evidence, not the grant. A crawler entering any of them reaches the hub in one hop.

- <https://aideazz.xyz/portfolio> (primary hub)
- <https://aideazz.xyz/api> (audit API + free tool)
- <https://webhook.aideazz.xyz/whitespace/atlas.html> (Atlas board)
- <https://aideazz.xyz/portfolio#portfolio-inquiry-form>
- <https://aideazz.xyz/sop-ai-ops.html> (ops & marketing engine SOP)

- <https://podcast.aideazz.xyz/>

WHAT I WILL NOT SIGN

Exclusive grant. Copyright assignment. Any term that requires taking a product down, transferring a domain, or including CRM / chat logs / keys / client data.

ASK

Match a lab to this bundle on the terms above. Tell me the actual payout for these eight given they were public until 30 August 2026, the licence is non-exclusive, and the Lab stays up. I attend the DataVendor call. I sign a marketplace NDA that keeps ownership. I do not sign exclusive.

Elena Revicheva | Aideazz AI Lab | Panama City | UTC-5
