Elena Revicheva

AI-native systems operator, product builder and executive leader.

I design the system, direct AI-assisted implementation, ship it, operate it — and own the outcome.

Published AI films 8

Years as Deputy CEO & CLO 7

• The operating model

Not a candidate plus tools. One AI-native operating unit.

Note · How I work

Elena Revicheva · Oct 1, 2026

I operate an AI-native development environment where specialized agents handle much of the implementation execution. I own requirements, architecture, orchestration, evaluation, deployment, monitoring and production decisions.

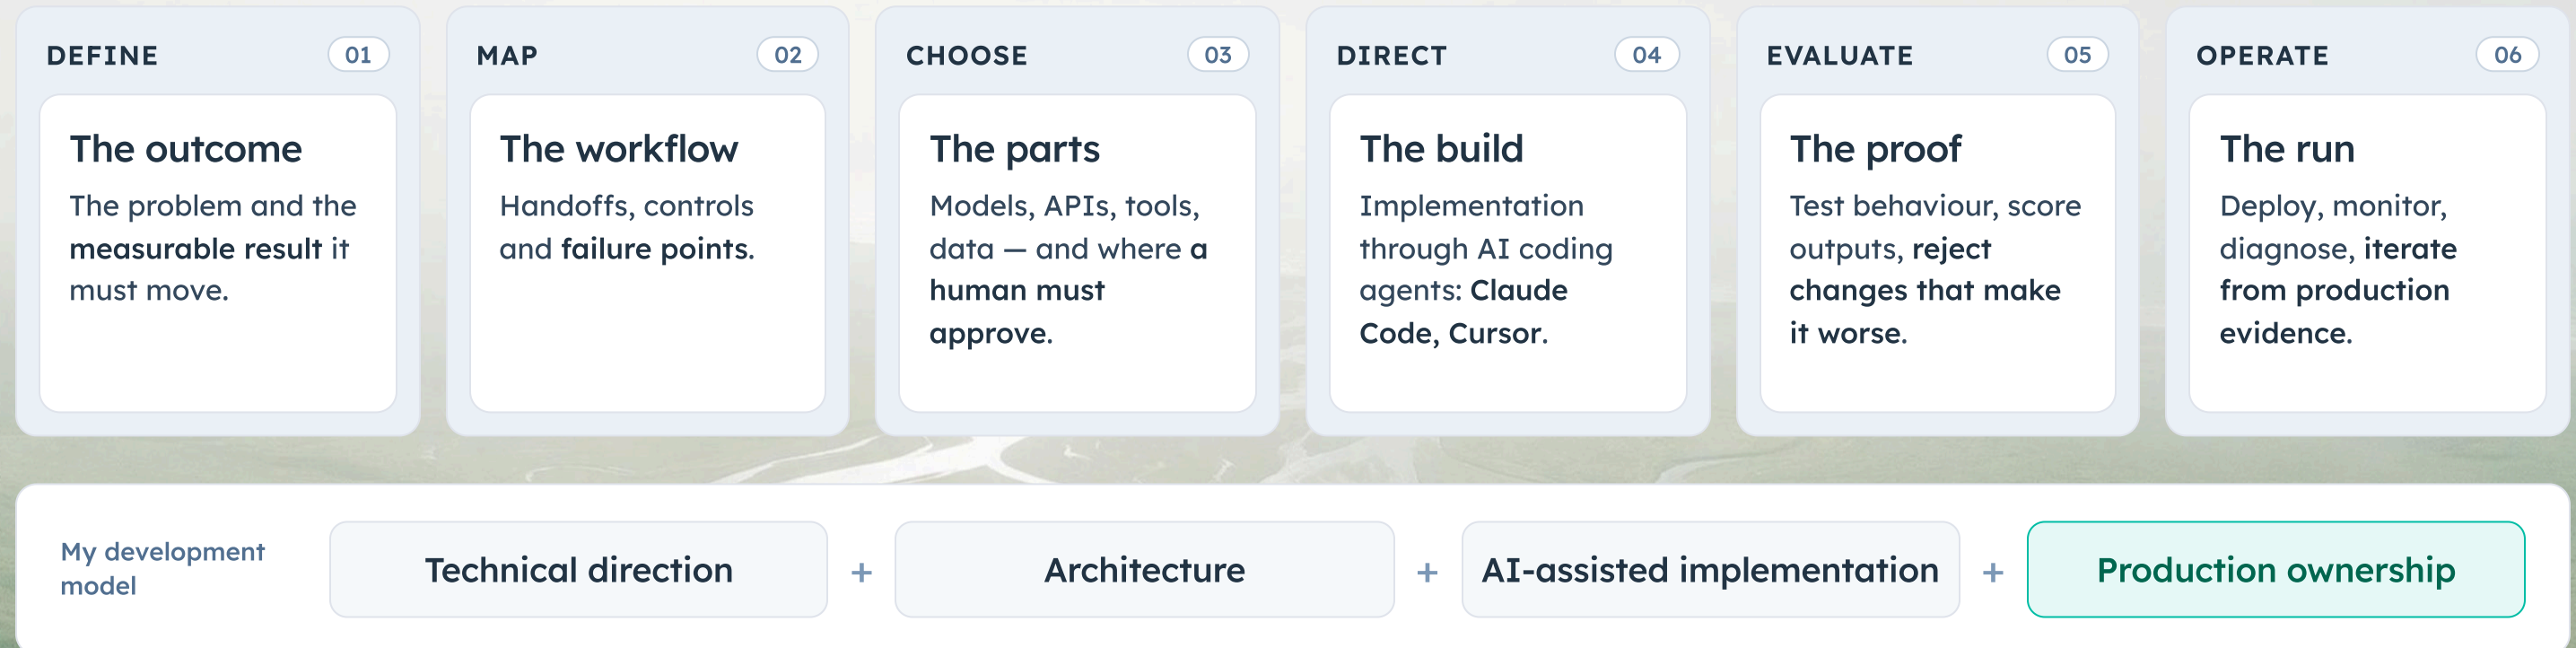

The distinction

I don't sell unaided typing speed.

I own the decisions that determine what gets built, what ships, how it behaves — and what happens when it fails.

- What I actually do

I turn ambiguous business and creative problems into working AI-native systems.

- Where I create the most value

Three lanes. One pattern underneath.

Lane 01

AI Operations

- Workflow discovery & automation
- Agent orchestration
- CRM & pipeline operations
- Monitoring & feedback loops

Proof in production

2,800+

deals, 1,300+ contacts and 2,100+ companies attributed by agents in HubSpot — research, qualify, draft, one human tap, send.

Lane 02

AI Product & Transformation

- Prototype the experience
- Connect systems & deploy
- Organise operations around it
- Improve from evidence

Proof in production

420+

audits across 210+ sites by my AI Visibility Audit API — a live public product scoring how ChatGPT, Perplexity and Claude see a business.

Lane 03

Creative AI Systems

- Concept, narrative & world-building
- Image · video · audio orchestration
- Production pipelines
- Published experiences

Proof in production

8 films

published from my ATUONA universe — 99 poems in Russian and English, made end to end by my own pipeline.

The through-line: I design intelligent systems and the experience around them — from the agents that run a business to the films they make.

● Evidence

I operate systems, not slides.

● Live · one cloud VM · \$0/month

15

long-running production services + 20 scheduled jobs

All auto-restart. I am the architect and the on-call.

Opportunities processed
LangGraph pipeline · human decision gates

11,000+

Learns hourly from the decisions I record in the CRM.

Discovery & qualification

CRM deals run by agents
HubSpot · source attribution

2,800+

1,300+ contacts · 2,100+ companies. Sending is fail-closed.

AI operations · RevOps

AI-visibility audits
Public API · GEO / AEO

420+

14,000+ signals across 210+ sites. My own hub scores 100/100.

GEO · AEO · Tech SEO

ATUONA AI Film Studio

8

Crimson Escape: 3:36, 16 generated shots, mixed to -15.7 LUFS.

Creative AI production

Automated tests
Unit · integration · golden set

600+

Run in under a minute; a 5-provider LLM fallback chain.

Reliability & evaluation

Executive foundation
Deputy CEO & Chief Legal Officer

7 yrs

Government digital-services operator: transformation, IT, governance.

Leadership

All figures are floors from production logs and the live CRM API, counted 28–29 September 2026.

• Ownership under failure

What I do when it breaks — and what it's called.

Silent failure

An integration that never said it was broken

- Found** Trial sign-ups had never reached the CRM since launch, while the sender's log looked healthy.
- Did** Audited from the receiving end, root-caused, fixed, backfilled all 28 lost users.

Vacuous guard

A spending cap that could never fire

- Found** The budget guard read a price field the vendor never sends, so every price passed.
- Did** Fixed it against the vendor's real response and published the postmortem.

Evaluation gate

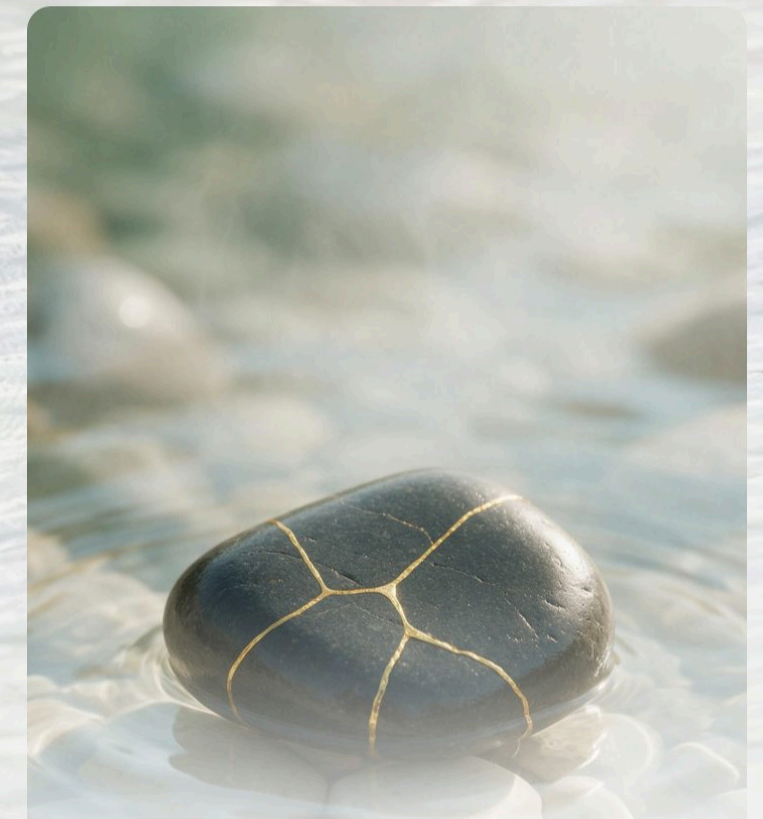

The more complex model lost

- Found** A RAG upgrade to my screening judge scored lower on an evaluation set built from my real decisions.
- Did** Shipped it switched off. Accuracy beats sophistication.

Graceful degradation

A provider retired its models. Nothing went down.

- Found** A vendor deprecated the models my agents used.
- Did** The five-provider fallback chain kept the fleet serving — a config change, not an outage.

Kintsugi, not cover-ups

The repair stays visible. Postmortems with named failure modes are published openly.

Not my fit

Roles whose core value is unaided coding, algorithm drills or live coding — or proving the work can be done without AI.

● Fully remote

Panama · UTC-5 · overlaps US Eastern & Central

LATAM-friendly teams

English · Russian

AI-native systems ownership.

Former executive. Hands-on builder. Production operator. Creative technologist.

I'm looking for a team that wants someone to own the path from an ambiguous problem to a deployed, measurable AI system.
