PROFILE

AI-native creative builder who owns generative video end to end — concept, scripting, prompt design, model selection, generation, assembly and release. Founder of **ATUONA**, an underground AI film studio producing aesthetic AI cinema from fully generative pipelines (LLM → image → video → voice and music → published film): **8 films published**, drawn from my own universe of **99 published poems**. Fast, experimental, self-directed: I onboard new generative models as they ship and fold them into repeatable production workflows. Hands-on AI building paired with 7 years of board-level executive leadership — I take an idea from concept to finished, published output without supervision.

WHAT I BRING TO THIS ROLE

- **End-to-end generative video ownership** — ideation → prompts → generation → assembly → publish, run solo.
- **AI video and image models in real production** — Kling, Runway, Luma, Wan for motion; Flux, Seedream, Ideogram for stills; an LLM for concept, script and shot direction.
- **Multimodal pipelines** — text, image, video and voice composed into coherent published pieces, with tight iteration loops for style and continuity.
- **Rapid model adoption and workflow refinement** — every shot type goes through a model bake-off before it enters the pipeline; comfortable with ambiguity and toolchains that change monthly.
- **Aesthetic and narrative direction** — grounded in a published poet's sensibility; storytelling, atmosphere and tone are native to how I work.

SELECTED WORK

ATUONA — AI Film Studio & Creative AI Pipeline | **Founder / Creator** — 2019 – Present

"Underground Aesthetic AI Cinema" — a self-directed studio producing fully generative short-form films · atuona.xyz/aifilmstudio

- Own the entire generative stack per piece: concept and script → image generation → video generation → narration locked to each clip, music ducked under the voice → assembly → published release.
- **8 published films**, the latest *Arearea* (October 2026). *Crimson Escape* runs 3:36 from 16 newly generated shots, mixed to broadcast loudness at −15.7 LUFS.
- Drive aesthetic direction, narrative tone and visual atmosphere across the body of work; iterate prompts and switch models per shot to keep visual coherence and style consistent across a sequence.
- Every render is checked before release. Source material is my own poetry, so every piece is cleared outright for publication; published on web and on-chain (IPFS / Polygon).

Tools: Kling · Runway · Luma Dream Machine · Wan · Grok Imagine · Flux · Seedream · Ideogram · FFmpeg · IPFS/Polygon

Multimodal AI Production — AIdeazz Ecosystem | **Founder / Builder** — 2025 – Present

Voice, image and video generation pipelines feeding live channels (film, podcast, social, creative boards)

- A production bot that drives a dozen video and a dozen image models, with an LLM acting as director and a pre-render budget guard. When that guard could never fire — it read a price field the vendor never sends — I found it, fixed it and published the postmortem.
- **WHITESPACE / Atlas** — a live board that turns a brief into fresh creative angles for media buying, with generated stills and short video for each angle.
- Voice pipelines (transcription plus AI text-to-speech for narrated media) and a podcast; I keep testing new AI media models and fold the strongest into repeatable workflows.

Applied AI Builder — AIdeazz (Founder-led AI Lab) | **Founder** — 2025 – Present

- Designed, shipped and operate **15 production services** solo using an AI-augmented workflow (Cursor + Claude Code) — concept to deployment to live operation.
- Multi-model, cost-aware routing with budget guards and provider fallbacks — deliberate judgment about which model fits which job, the same call as choosing the right generative model per shot.

EARLIER CAREER — EXECUTIVE

Deputy CEO & Chief Legal Officer | **JSC "E-GOV Operator" (Russia)** — 2011 – 2018

- 7 years of board-level leadership on a large-scale digital transformation programme — high autonomy, high ownership, cross-functional delivery.

Operational Co-Founder | **OmniBazaar** — 2024 – 2025

TOOLS & STACK

Gen video / image: Kling, Runway, Luma Dream Machine, Wan, Grok Imagine, Flux, Seedream, Ideogram

Creative / LLM: Claude, GPT, Gemini, text-to-speech, transcription

Pipeline / build: Python, TypeScript/Node, FFmpeg, prompt engineering, IPFS/Polygon

Method: AI-augmented development (Cursor + Claude Code); fast adoption of new gen-video models

CREATIVE & LANGUAGES

Published poet — 99 poems in Russian and English (atuona.xyz). Storytelling and atmosphere are native to my practice.

Disposition: experimental, self-driven, comfortable with evolving toolchains and fast test-fail-refine cycles.

Languages: Russian (native), English (fluent), Spanish (intermediate), French (elementary)
